Last week, the National Council of Urban Indian Health signed-on to a letter to Congress led by the National Home Visiting Coalition in support of the reauthorization of the Health Resources & Services Administration (HRSA) [Maternal, Infant, and Early Childhood Home Visiting Program](#) (MIECHV). The recommendations for reauthorization outlined in the letter include:

- Increase MIECHV funding over the next five years to reach more families and better support the workforce
- Double the Tribal MIECHV set-aside from three to six percent
- Continue to allow virtual home visits with model fidelity as an option for service delivery
